

being undoubtedly feels the influence of Sun. It is clear that while some can endure to certain degrees of temperature, some to other. And beyond a certain temperature none can live.

Similarly, the other invisible quanta of energy in Sun affect different human beings in different forms. However, it becomes a Herculean task to explain all those affects in a normal fashion. It needs extra-sensory

power to understand those minute influences of Sun. It even implies to other planets.

When the strength of the modern human being turned so feeble to understand the inner self of the other, it is quite beyond reach to his caliber to understand the micro level influences of the celestial bodies on him.

On that account, Astrology is a boon by our ancestors of great wisdom, that shows the path in a terrestrial style, to lead lives happily and meaningfully through understanding the self, rectifying the mistakes and following the laws of nature in a noble way.

Many celestial bodies in the Uni-

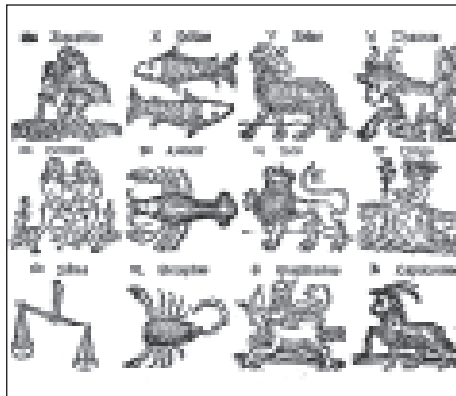

verse those are being found by the modern Astronomy were discovered millenniums back, when there were no telescopes even.

The predictions those were postu-

lated (by the illiterates of modern education but intellectuals in Astrology) regarding weather or Astronomical incidences (Chandra Grahana or Surya Grahana) by looking at the astrological charts are almost coming in tune with the mod-

ern meteorological predictions of the scientists. So, it is an acceptable truth that Astrology is not an illusion as many consider, but is a great science. Only the predictors may vary in their interpretation-skills, which decide the "Reality in Astrology"™ in the purviews of the people.

However, Astrology is a science that helps the people to change their lives that tantamount to their right destiny. Hence, apart from anything else, a right Astrologer should be an able counselor, boosting the confidence in the individual by driving him towards optimism. An Astrologer should be a rectifier who converts the sinister energies into positive energies.
